CORESENSE

CORESENSE

The **CORESENSE Project** is a four year research project focused in the development of a *technology of machine understanding* for the construction of dependable autonomous systems. It is a project funded by the European Union.

Programme: Horizon Europe
Project number: 101070254
Project name: CoreSense: A Hybrid Cognitive Architecture for Deep Understanding
Project acronym: CORESENSE
Topic: HORIZON-CL4-2021-DIGITAL-EMERGING-01-11
Type of action: HORIZON Research and Innovation Actions
Granting authority: European Commission-EU
Project start date: 1 October 2022
Project end date: 30 September 2026
Project duration: 48 months

Most of CORESENSE results are open science but IPR regulations may still hold. Requests for permission to reproduce this document or to prepare derivative works of this document should be addressed to the CORESENSE Consortium IPR management.

Executive Summary

Title: $\LaTeX$ Report Template

Subtitle: A template for reports and deliverables

Author: Ricardo Sanz

Reference: CS-012 v 0.2

Date: 2022/12/24

Dissemination level: PU - Public

URL: <http://www.coresense.eu/doc/CS-012.pdf>

This document is an example of use with some basic explanations of the $\LaTeX$ class `csreport.cls`. This class is to be used in CORESENSE large reports, esp. deliverables.

■ 1 Introduction

This brief report describes the **CORESENSE template for reports and deliverables**. It is a template based on the $\text{\LaTeX}$ document processing system [?].

The default formatting of a $\text{\LaTeX}$ document is determined by the *class* used by that document at the very beginning of the source file.

This document describes the CORESENSE $\text{\LaTeX}$ template for reports and deliverables that is provided in the form of a class file: `csreport.cls` and additional resource files that will be described below.

The logos, colors and fonts of this template are based on the CORESENSE Brand Guidelines [?].

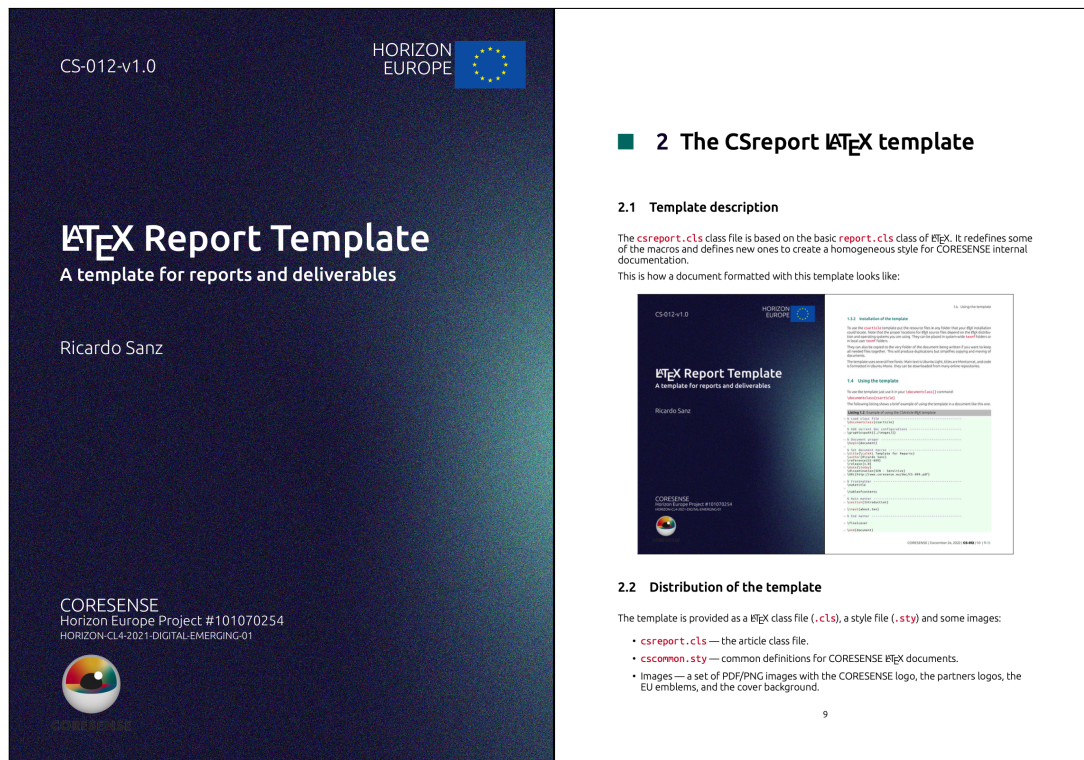

Precisely how much of the business of thinking a machine could possibly be made to perform, and what part of it must be left for the living mind, is a question not without conceivable practical importance; the study of it can at any rate not fail to throw needed light on the nature of the reasoning process. [?]

■ 2 The CSreport $\LaTeX$ template

2.1 Template description

The `csreport.cls` class file is based on the basic `report.cls` class of $\LaTeX$. It redefines some of the macros and defines new ones to create a homogeneous style for CORESENSE internal documentation.

This is how a document formatted with this template looks like:

2.2 Distribution of the template

The template is provided as a $\LaTeX$ class file (`.cls`), a style file (`.sty`) and some images:

- `csreport.cls` — the article class file.
- `cscommon.sty` — common definitions for CORESENSE $\LaTeX$ documents.
- Images — a set of PDF/PNG images with the CORESENSE logo, the partners logos, the EU emblems, and the cover background.

The source file used to generate this document (`csreport.tex`) is also distributed with the template as an example of use.

The template uses the following fonts: `Ubuntu Light` for main text body; `Montserrat` for titles¹; and `Ubuntu Mono` for code.

2.3 Installation of the template

To use the `csreport` template put the resource files in any folder that your $\LaTeX$ installation could locate. Note that the proper locations for $\LaTeX$ source files depend on the $\LaTeX$ distribution and operating systems you are using. They can be placed in system-wide `texmf` folders or in local user `texmf` folders.

They can also be copied to the very folder of the document being written if you want to keep all needed files together. This will produce duplications but simplifies copying and moving of documents.

The template uses several free fonts: Main text is `Ubuntu Light`, titles are `Montserrat`, and code is formatted in `Ubuntu Mono`. they can be downloaded from online free repositories.

2.4 Template Packages

The template class file pre-uploads the following packages:

Table 2.1: Pre-uploaded Packages

Package	Use for
<code>listings</code>	to include code listings (see $\LaTeX$ example above)
<code>titlesec</code>	to change section titles format
<code>hyperref</code>	to handle hypereferences
<code>fontspec</code>	to change document font
<code>graphicx</code>	to include graphics
<code>tikz</code>	to create graphics (e.g. generate the EU flag).

2.5 Template Colors

The template defines the colors that are shown in Table ???. You can use any color using the `\color{}` command; e.g.:

```
{\color{CSGray}This text is CORESENSE gray and this one is
\color{CSOrange} CORESENSE yellow.}
```

renders this:

This text is CORESENSE gray and **this one is CORESENSE yellow.**

¹Google Montserrat is similar to Adobe Futura but can be used freely.

Table 2.2: Template colors (name, RGB, example).

Name	HTML	Color
CSGreen	HTML(#006A63)	
CSRed	HTML(#BF002A)	
CSRussianGray	HTML(#0C0026)	
CSMaroon	HTML(#512977)	
CSOrange	HTML(#EAB82D)	
CSLightGreen	HTML(#009990)	
CSUltraLightGreen	HTML(#EEFFFA)	
CSLightOrange	HTML(#FAD85D)	
CSUltraLightOrange	HTML(#FFEECC)	
CSLightMaroon	HTML(#613997)	
CSUltraLightMaroon	HTML(#B1A9f7)	
CSGray	HTML(888888)	
CSLightGray	HTML(BBBBBB)	
CSUltraLightGray	HTML(EEEEEE)	

■ 3 Using the template

3.1 Creating a report

The formatting of a $\text{\LaTeX}$ document is determined by the *class* used by that document at the very beginning of the source file:

```
\textbackslash documentclass\{article\}
```

The default look can then be changed by means of including extra *packages* or redefining some of the commands or parameters.

```
\textbackslash usepackage\{fancyhdr\}
```

The class file names have the `.cls` extension, the package file names have the `.sty` extension.

```
10 % Load class file -----
   \documentclass[a4paper,11pt]{csreport}
12
   % Add current doc configurations -----
14 \graphicspath{./images/}

   % Document proper -----
16 \begin{document}

18
   % Set document macros -----
20 \title{CoreSense Report Template}
   \subtitle{A \LaTeX\ template}
22 \author{Ricardo Sanz}
   \copyrightyear{2022}
24 \reference{CS-R-XXX}
   \release{0.0}
26 \status{Draft}
   \dissemination{SEN - Sensitive}
28
   % Frontmatter -----
30 \maketitle

32 \documentversions
   \versionitem{0.0}{Initial draft}{R.Sanz}{2022/06/20}
34
   \tableofcontents
36
   % Main matter -----
38 \chapter{Introduction}
   \input{about.tex}
40
   % End matter -----
42 \finalcover

44 \end{document}
```

3.2 Template Macros

These are the macros provided by the template; some of them are the same as the base `article` class:

`\title{}` — Sets the title of the document.

`\author{}` — Name of author.

`\date{}` — Date of the document.

`\reference{}` — Reference (See CORESENSE controlled documents list).

`\release{}` — Release (See CORESENSE controlled documents list).

`\URL{}` — Link to download the document.

`\delno{}` — Specify a number for a deliverable.

`\background{}` — Select background image for cover.

`\approval{}` — Approval signatures for deliverables.

`\documentversions{}` — Start versions page.

`\versionitem{}` — Add version item.

`\URL{}` — Link to download the document.

`\finalcover` — Generate final cover with data, acknowledgements and disclaimer.

`\euflag{}` — Generate an EU flag; e.g. `\euflag{0.02}` generates this .

`\code{}` — Change font to monospaced colored (to highlight code).

`\tabtitle{}` — Change table title to green background. See Table ?? below for an example.

`\bkg,bkr,bkl,bkma,bko,bkx` — Change table cell background to green, red, light green, light maroon, light orange, and light gray.

`\quotecite{...}` — Insert a quotation with a cite to bibliography.

Example of use of the `\quotecite{...}{Sowa-2007}`:

A procedure is used in only one way, but a declarative specification can be used in many different ways. [?]

Example of use of the macros for coloring tables:

```

10 \begin{table}[h!]
   \centering
12 \renewcommand{\arraystretch}{1.2}
   \caption{Pre-uploaded Packages}\label{tab:packages}
14 \begin{tabular}{|c|c|}\hline
   \tabtitle{Package} & \tabtitle{Use for} \\ \hline
16 \bko listings & to include code listings (see \LaTeX\ example above) \\ \hline
   \bko titlesec & to change section titles format \\ \hline
18 \bko hyperref & to handle hyperreferences \\ \hline
   \bko fontspec & \bkx to change document font \\ \hline
20 \bko graphicx & to include graphics \\ \hline
   \bko tikz & \bkm to create graphics (e.g. generate the EU flag). \\ \hline
22 \end{tabular}
   \renewcommand{\arraystretch}{1}
24 \end{table}

```

3.3 T_EX Engine

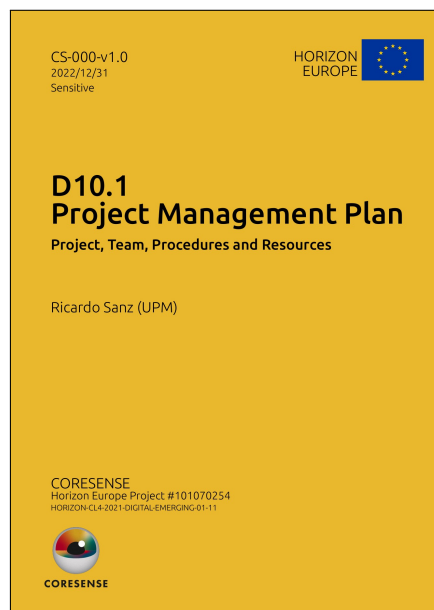

This template uses the `fontspec` package and shall be compiled with `xelatex`.

3.4 Using the template for deliverables

In case of using this template for project formal deliverables, please follow these rules:

1. Set the deliverable number (e.g. D4.3) using the command `\delno{D4.3}` and the deliverable name as `\title{Report on Experimental Understanding}`.
2. Use the plain orange cover instead of the iris background cover with the command `\orangecover`.
3. Use `\subtitle{}` to make any precision or highlight some aspect of particular relevance. You may also leave it empty.
4. Identify the partner organisation in the authors list (e.g. `\author{R.Sanz (UPM)}`).
5. Establish the dissemination level of the deliverable with `\dissemination{}`. Our dissemination levels are only two: PU - Public and SEN - Sensitive.
6. Verify that the list of document versions is complete and correct.
7. Add a `\approval{}` section after the list of versions (when the deliverable is approved by WPL, PC, and QA).

The cover of a deliverable contains some more information than a conventional report. This is how the deliverable cover is rendered:

Beware that deliverables shall follow the QA process stated in the PMP [?]. This means they shall be approved by AA partner and the PC. Use the `\approval` command for this. Beware this command has six arguments (WPL approver, date; PC approver, date; QA approver, date). For example, use the following code for including the approval for a deliverable produced by FHG to be QA by IMR:

```

10 \approval{N. Hammoudeh (FHG)}{2022/12/13}
    {R. Sanz (UPM)}{2022/12/14}
12 {C. García (IMR)}{2022/12/14}
```

Will render this deliverable approval text into the document at the bottom of the page where it is used:

Deliverable Approval

2022/12/13 — **WPL**: N. Hammoudeh (FHG)

2022/12/14 — **PC**: R. Sanz (UPM)

2022/12/14 — **QA**: C. García (IMR)

The class file

This is the `csreport.cls` class file used to generate this report.
